GIRO-230

remote control system

GIRO-230 is a radio frequency remote control system composed of a single-channel remote control with a signal range of up to 10 metres, a support bracket for attaching it to the wall, and a 230 Vac receiver module. The receiver, wired with a 1800 mm power cable and an EU plug for mains connection, comes with a 500 mm output cable and a two-pole socket. GIRO-230 makes it possible to create lighting systems with one remote control and three receivers (1 master and 2 slaves), or to control one receiver with multiple remote controls (up to 9). The remote control activates the ON and Off functions (no dimmer).
